Biographical note

Boggavarapu Kiran is a computational scientist in the Department of Chemistry and Physics at McNeese State University. His methodological work concerns simulation as a tool for deriving the consequences of specified structural assumptions, an approach he brings from computational physical science to the study of institutions. His current research applies agent-based modelling to enforcement dynamics in codified communities, with particular attention to the structural conditions under which sanctioning authority concentrates and membership becomes durable. He works on the historical and comparative application of this framework to religious and colonial institutional regimes.

Declarations

Funding: No funds, grants, or other support was received.

Competing interests: The author has no competing interests to declare that are relevant to the content of this article.

Author contributions: The single author conceived the study, implemented the model, conducted the analysis, and wrote the manuscript.

Data and code availability: All code and data are publicly available at <https://github.com/khatvangi> and will be linked from the article upon acceptance.
